Magnescale digital length measuring and gauge systems

CO1.001.EN.20151102

Magnescale systems – empirically the best

Magnescale's know-how about magnetism has resulted in the development of several magnetic measuring principles, among which Magnescale and Digiruler. These unique measuring principles are applied in both the scales as in the probes.

Well resistant to dirt, chips, oil, shocks and vibrations in comparison with other measuring principles. Reliable even in the harshest environments.

The Magnescale measuring systems have a leading position in the international market for DRO equipment. In comparison with other systems Magnescale always comes out on top. In the end the quality of Magnescale always turns out to be decisive.

The Magnescale systems offer optimal reliability and are with an unprecedented lifetime for every company a justified and interesting investment. Therefore we offer a two-year guaranty on the Magnescale measuring systems.

Magnescale SJ700A scale systems with favourable price-performance ratio

The SJ700A scales are an excellent choice for applications (lathes, milling machines) where a resolution of 5 µm is sufficient. A real Magnescale with a favourable price-performance ratio.

- Measuring range: 0- 1600 mm.
- Highest resolution: 5 µm.
- Accuracy at 20°C:
 $L \leq 1250 \text{ mm: } \pm 10 \mu\text{m,}$
 $L \leq 1600 \text{ mm: } \pm 15 \mu\text{m.}$
- Linear expansion coefficient: $(12 \pm 1) \cdot 10^{-6} / ^\circ\text{C.}$
- Operating temperature: 0 to 40°C.
- Cross-section: 24 x 25 mm.

Magnescale Digiruler MJ100/110 detectors (for SL130/331)

The Digiruler detectors MJ100 and MJ110 can be used with the PL60 reading head and the SL331 scale for a highest resolution of 2 μm . The detectors can also be used with the PL25 reading head and the SL130 scale for a highest resolution of 5 μm . Accuracy as described for the SL scales. The maximum measuring speed depends on the pulse time (MJ100: 100 ns, MJ110: 1 μs) and the set resolution. The SR-721SP is a unique product, that proves its quality in the DeMeet-220 3D measuring machines.

- Measuring range: 0 - 475 mm.
- Highest resolution: 0.1 μm.
- Accuracy: ± 1 to 3 μm (depending on the measuring range), as specified on the laser measuring report.
- Linear expansion coefficient: $(14 ± 1) \cdot 10^{-6}/^{\circ}\text{C}$.
- Total length = L + 100 mm.
- Standard supplied with braided cable (1 m) and connector.
- Connecting cable unit has to be ordered separately.
- Dimensions reading head (without mounting plate): 14 x 16 x 40 mm.

Magnescale SR series scale systems for CNC applications

Magnescale's proven Magnescale principle is enhanced by several new technologies. These feedback scales boast superior speed and accuracy in addition to their conventional high level of reliability under very harsh conditions, with a highest resolution of 10 nm.

Available with output A/B phase or conform protocol (Mitsubishi/Yaskawa/Panasonic/Siemens DRIVE-CLiQ/Fanuc).

Aimed at OEMs and machine builders as an alternative with the advantages of Magnescale.

Magnescale Digiruler SL700 scales for a large measuring range

The SL700 series is a high-grade ribbon-type feedback system with a large measuring range and high accuracy for CNC applications. The non-contact, extremely reliable magnetic scales generate an analog, A/B phase or output signal according to a certain protocol. Four types with different reference point specifications are available.

Magnescale Laserscale scale systems

The Laserscale is a non-contact measuring system, developed by Magnescale, with the world's highest resolution of 0.0084 nm. Very high accuracy measurements of $\pm 0.03 \mu\text{m}$ can be realized. These Laserscales are typically not affected by changes in temperature, humidity and air pressure. Applications of the Magnescale Laserscale are for example measuring machines, electron microscopes, precision lathes and grinders, LCD inspection equipment and wafer inspection devices.

Magnescale Rolling Mill

Magnescale Rolling Mill is a feedback scale system used in rolling mills. Rolling mills are steel mills where metal is rolled into sheets and bars. Magnescale is a proven and reliable system, which is shock- and waterproof and resistant against high pressure, that ensures the correct thickness.

Magnescale specials

Due to the slim design and resistance against harsh environments the Magnescale scales can be implemented in various systems and processes. The SR-721SP can for example be built in cylinders for linear actuators.

Magnescale DK805SB/812SB gauges

The Magnescale DK gauges are developed using the MR (magnetoresistance) sensor principle and have direct A/B phase output. The MR technology enables a 0.1 µm detection resolution. The gauges have a built-in reference point at 1 mm from the idle point of the spindle. Various models are available, e.g. with pneumatic push or vacuum retract.

- Measuring range: 5 or 12 mm.

Magnescale MG modular multi-interface system

The MG series is a modular gauging system designed to be incorporated into assembly lines and inspection equipment. Different MG modules are available for connecting gauges of the Magnescale DK, DT and MF series.

The MG10/20/30 interfaces are connectable via RS232C or BCD. Gauges are connected to the MG20 modules. Up to 16 MG20 modules can be connected to one MG10 base module. The MG10 module can itself be linked to three other MG10 modules, which enables output of measuring data of up to 64 gauges through one RS232C port, or BCD via an additional MG30.

The MG40-series ethernet interface series is developed for the Magnescale DK gauges. Up to 100 channels can be connected to the MG41. The MG41 itself has a direct connection possibility for 4 DK gauges and can be expanded with MG42 extension modules with the connection possibility of 4 gauges each.

The MG50 is a new EtherCAT / CC-link interface compatible with the Magnescale DT and DF probes. With one probe per MF10-CM up to 10 probes can be connected to one MG51, and up to 8 MG51's can be connected to one MG50. A maximum total number of 16 (CC-Link) or 30 (EtherCAT) probes can be connected to one MG50. The MG50 is PLC programmable and Fieldbus compatible.

- Input resolutions:
0.1 μm , 0.5 μm , 1 μm , 5 μm and 10 μm .
- Preset/reset/recall.
- Hold functions for when the workpiece is changed.
- Min/max/P-P function.
- Go/NoGo tolerance evaluation.
- Alarm function.
- Reference point: if present on the gauge.
- Operating temperature: 0 to 50°C.

Probe set for calipers

This probe set enlarges the possibilities of a regular caliper. Probe holders are slid on the measuring jaw of the caliper. The different probes can be screwed onto them. The probe set makes it possible to execute measurements which are not possible with a regular caliper, such as measuring internal grooves and center distances.

- Maximum jaw thickness: 3.2 mm.
- Delivery in a wooden case.

The set consists of:

- ① right probe holder,
- ② left probe holder,
- ③ pair of disc probes $\varnothing 6$ mm,
- ④ pair of disc probes $\varnothing 10$ mm,
- ⑤ pair of disc probes $\varnothing 12.5$ mm,
- ⑥ pair of cone probes $\varnothing 9$ mm, 60° ,
- ⑦ pair of cone probes $\varnothing 12.5$ mm, 60° ,
- ⑧ pair of cylindrical probes $\varnothing 1.5 \times 9$ mm,
- ⑨ hexagon key.

Thread measuring wires

For measuring external threads using the three-wire method. The flank diameter can be determined according to the measured diameter, using tables.

- For micrometers with measuring faces $\phi 6.35$, $\phi 6.5$ or $\phi 8$ mm. (Also available for measuring faces $\phi 6.8$ and $\phi 7.5$ mm.)
- Very high measuring accuracy: ± 0.001 mm.
- In pairs or in a set.
- The wire holders are held in position on the anvil and spindle by a spring clamp.
- The wires are mounted on the holder in such a way that they position themselves on the thread.

Schwenk internal measuring instruments

These internal measuring instruments are used for measuring cylindrical bores and form deviations compared to standards, for example, setting rings. In order to read out the measured values, any existing dial indicator or measuring probe with a clamping stem of $\varnothing 8$ mm can be used. The reversal point marks the right diameter of the bores. With digital indicators, it is recommended to use types that have a hold function for minimal measuring values.

- Measuring range: 4.5 - 800 mm.
- Read-out depends on the type of dial indicator or measuring probe.
- Accuracy: 4.5 - 290 mm: ≤ 0.002 mm,
280 - 800 mm: ≤ 0.003 mm.
- Repeatability: 4.5 - 290 mm: ≤ 0.0005 mm,
280 - 800 mm: ≤ 0.0015 mm.
- Clamping shaft: $\varnothing 8$ mm.
- Self-centering bridge.
- Fixed measuring probe supplied with tungsten carbide ball tip.
- Interchangeable probes standard supplied with tungsten carbide ball tip.
- Interchangeable probes also available with steel or ruby ball tip.
- Centering bridge available with a durable layer.
- Delivery in a case incl. probes, spacer rings (from 12 mm) and measuring report.

Mitutoyo setting instruments for stick micrometers

This instrument has been especially developed for the calibration of stick micrometers. It consists of a step gauge with ceramic gauge blocks, two clamping elements with V-shaped supports and two 10 mm ceramic gauge blocks.

The ceramic gauge blocks can be clamped to the step gauge at any desired distance of each other. In that way the stick micrometer that has to be checked rests perfectly aligned on the V-shaped supports and touches the gauge blocks with its measuring points. Only suited for mechanical stick micrometers.

Universal measuring instruments

Robust universal measuring instruments for measuring by comparison, consisting of a steel precision cylinder with one fixed (adjustable) and one mobile measuring arm holder. The measuring direction is reversible by a simple turn of the adjusting screw at the end of the instruments. This feature enables measurements of internal and external dimensions. Clamping shaft 8H7 for dial indicator or measuring probe (measuring range 0-10 mm) not included. The nominal size is set with gauge blocks, setting rings or something similar.

Peacock dial indicators with back plunger

The back plunger dial indicator is characterized with easy handling since the spindle with the contact point is moving in the direction perpendicular to the dial face and the gauge is more compact. The dial indicator moving of this type is convenient for use in achieving a parallelism of the table of the machine tool, with measuring jigs, in restricted areas and on locations where scale reading is difficult.

Käfer Feinika dial indicators 0.001 mm

The Käfer Feinika dial indicators have a special construction without gear wheels, comparable to the precision dial indicators. A special lever construction enlarges the measuring range up to 1 mm. This lever construction gives the Feinika a very low hysteresis of maximal 1.5 μ m, making it very suitable for very accurate comparative measurements where a large measuring range is necessary. Just like the precision dial indicators the Feinika has a resolution of 0.001 mm.

Käfer saw tooth indicator

By placing the indicator on the saw blade you can easily measure the flatness of the blade, enabling you to saw very precisely. With the indicator you can also measure the height difference between the saw blade and the tooth. This principal of differential measuring of thickness or heights is not only suited for saw blades, but has many other applications.

Because the indicator has a two-sided read-out, it is usable for left- as well as right-handers.

- Measuring range: 0-2 mm.
- Graduation: 0.05 mm.
- Rotatable dial.
- Adjustable tolerance marker.

MF measuring fixture system

MF is a universal construction system based on components to quickly and easily build custom measuring fixtures.

The system has been developed by Schut Geometrical Metrology. The parts of MF are made from high quality steel and colored, anodized aluminum.

The system consists of, among other things, base plates, parallel spring elements, mounting bars, probe holders and probes. A stable product positioning is required for accurate measurements and because of the system's sophisticated composition, it is possible to generate a complete measuring system with only a few parts. Ideal for repeating measurements.

The components of MF are based on both horizontal support or vertical clamping. The wide range and shapes of probes make the system suitable for e.g. lathed parts but also for (more complicated) milling parts. For these various applications some complete sets are available, as a starter-set or for specific applications. Besides this, the variety of individual components and the ease of use enable almost endless possibilities of applying and incorporating MF in other measuring fixtures that may be custom built or composed of other construction systems.

All individual components are available separately, increasing flexibility of use. Schut Geometrical Metrology has incorporated MF many times in custom built measuring systems (see elsewhere in this catalogue).

MF's high quality and low price make an ideal addition to existing measuring systems and can be applied in production plants.

The universal properties of MF result in a highly flexible construction system. The use of internationally applied units of fit for e.g. dial indicators and electronic probes make the system's components widely applicable. With just some base elements it is very easy to create some individual measuring points on e.g. production machines.

MF measuring fixture system (continued)

For a quick start MF is also available in standard sets for a complete and quick solution for both horizontal support or vertical clamping.

One of the big advantages of MF is the ease and flexibility to create a stable measuring fixture especially suitable for repeating measurements with only very little effort and investments. To make the start with MF as easy as possible some standard sets have been composed that can realize the most occurring measuring fixtures.

These sets consist of a composition of standard MF components, so it can be easily extended to your liking for specific applications. All in this catalogue depicted measuring fixtures are just a few of the many possibilities of MF.

The easy assembly and modular setup make MF especially suitable for application in tailor-made and designed measuring systems.

For many years now Schut has been developing tailor-made solutions in measuring systems for its customers nationwide and abroad. On many occasions MF parts have been incorporated in these systems. We would be pleased to inform you about the possibilities to have your measuring system custom built, updated or extended.

Fisso Classic Line dial indicator stands

These dial indicator stands are manufactured according to the classic principle with chrome plated arm parts, joint together with the three hinge points by means of a central mechanic clamping device. Because this is done with one on/off switch control, the stand can be positioned easily and precisely.

- Fine adjustment: with clamping shaft $\varnothing 8$ mm (for dial indicators and probes) and dovetail joint (for lever-type dial test indicators).
- Dial indicator not included.
- Various bases, fine adjustments and other accessories available; see "Fisso dial indicator stand accessories".

Ceramic surface plates

Surface plates made of alumina ceramics are very durable, even under mechanically or chemically aggravating conditions. Some other important characteristics of alumina ceramics are:

- Low density.
- Low linear expansion coefficient.
- Low thermal conduction coefficient.
- High degree of hardness.
- Highly wear resistant.
- High rigidity through its unique hollow structure, as well as light in weight.
- Exceptionally strong.
- Easy to maintain.

Fine scraped plate (DIN 876/1) with lapp and inspection surface

Special duplex plate with one flat inspection surface and one squared lapp surface, both fine scraped according DIN 876/1. The squared side is especially suitable for lapping products on a very flat surface. The combination of the two plates saves a lot of space. When using the optionally available wooden case the surface plate can be used on both sides without the risk of damaging the surfaces, because the top and bottom side of the case can be separated.

- Flatness: 14 µm.
- Dimensions *l x w x h*:
360 x 260 x 65 mm.

Mitutoyo Surftest SJ-210 surface roughness tester

The portable Mitutoyo Surftest SJ-210 is a compact tester of surface roughness parameters, that can also function in hard-to-reach places because of the separable drive unit and probe. The diamond stylus has a radius of 2 μm and is retracted by the drive unit. After selection of the desired parameters, they can be read out clearly on the display. The SJ-210 has a USB, an RS232C and a Digimatic data output to which the Mitutoyo u-wave system can be connected for wireless data transfer. The data can also be stored on a micro-SD card. A large selection of probes and accessories is available.

An S-Drive unit is available on request, with a transverse tracing drive unit, for example for measuring in narrow spaces like crankshafts. Also available on request is the Front Lift model, where the drive lifts the diamond stylus at the end of the measurement and is retracted without touching the surface again.

Gauge blocks general

Which gauge block is the most suitable for you?

MATERIALS

Steel

Steel is the oldest material and remains the most commonly accepted for gauge blocks. If well taken care of, steel gauges guarantee many years of useful life. They must be cleaned carefully before and after use and stored in a protective case in a dry environment.

Tungsten carbide

When a higher degree of hardness is needed, tungsten carbide is the material to choose. It is less sensitive to wear and damage compared to hardened steel. Especially when used frequently, tungsten carbide has an increased life span compared to steel gauge blocks.

Ceramics

Ceramics is relatively wear resistant and has a high degree of strength and stability. It will not rust and is unaffected by chemicals.

ACCURACY CLASSES

Gauge blocks are classified in upgrading order of accuracy according EN ISO 3650: 1998 in the classes: 2–1–0–K. The ISO 3650 is an international standard, which is adopted by national standards such as RvA, DAkkS, UKAS, BKO, SCS and COFRAC.

Class 2

Class 2 gauge blocks are intended for general workshop use by skilled workers to set up, for example, measuring instruments.

Class 1

Class 1 gauge blocks are used as working standards in inspection rooms within the production to set and calibrate measuring instruments and equipment as well as to inspect tools, fixtures and machines.

Class 0

Class 0 gauge blocks, with their high accuracy, are intended for use by measuring technicians in environmentally controlled inspection rooms, for example to calibrate measuring equipments.

Class K

Class K gauge blocks have the highest class of accuracy. They are *the* length standards in a calibration laboratory and other calibration values are derived from these gauges. Only with a UKAS certificate – or with another certificate, accepted by UKAS as equivalent (e.g. DAkkS, RvA and COFRAC) – will these gauge blocks be at their best. The most accurate gauges can meet a tolerance of $\pm 0.05 \mu\text{m}$.

Ceramic gauge blocks

These ceramic gauge blocks are made of high-tech material: Zirconia ceramics. Because of this, these gauge blocks are highly durable, corrosion proof and completely stable for long-term use. Delivered with an inspection report.

- Highly wear-resistant. Can be used 5 to 10 times longer than steel gauge blocks.
- Rustproof.
- Hardness: 88 - 90 HRC.
- Expansion coefficient: $(10 \pm 1) \cdot 10^{-6}/^{\circ}\text{C}$ (same as steel gauge blocks, therefore they can be used at the same time).
- ISO 3650.

How to use an optical flat

The surface to be tested should be clean and free from burrs. Prevent touching the measuring faces. Finger prints should be removed instantly in order to prevent them from being imprinted in the surface. Optical flats should always be kept clean and dry in their cases.

Interference fringes appear in monochromatic light when the optical flat is laid on and wiggled against the surface to be tested. The difference in height between adjacent fringes corresponds to an error in flatness of approx. 0.3 μm . A non-occurrence of interference fringes is most likely the result of dust particles between the surface to be tested and the optical flat.

In the event of a constant distance between the interference fringes, the angle between the measuring face of the optical flat and the surface to be tested is constant (fig. 1).

However, interference fringes do not usually have an even interspacing. When the fringes are close together the angle between the measuring face and the surface to be tested is large (fig. 2). In this case the surface to be tested is either convex (fig. 2) or concave (fig. 3). When putting

pressure on the sides of the optical flat, the distance between the interference fringes at a convex surface will enlarge at the outer sides; angle α is decreasing. The deviation in flatness can be "measured" by counting the interference fringes.

The interference fringes do not usually have a straight and even pattern. Curved fringes are also an indication of an uneven surface. The extent of unevenness can, again, be obtained by counting the fringes.

Gauges / Pin gauges / Thread and tolerance tables

CI2.001.EN.20151102

Limit gauges for internal and external dimensions

The manufacturing tolerance and the permissible reduction in wear for plain gauges are laid down in DIN 7162.

New gauges are supplemented with a wear allowance on the Go end: z (plus) for plug gauges and z_1 (minus) for ring gauges. Accordingly, the size indicated on the handle is not similar to the measured value of the new Go end.

Example: plug gauge 30 H9

New Go end:

size	30.000 mm
wear allowance (+z)	<u>0.009 mm</u>
	30.009 mm
manufacturing tolerance	± 0.002 mm
largest value measured	30.011 mm
smallest value measured	30.007 mm

The gauges are also available without wear allowance (additional cost). This should be indicated when ordering.

Plug gauges

Manufactured according DIN 2245, 2246 and 2247. Available from 0.5 to 250 mm; up to 70 mm with Go and NoGo on one handle, over 70 mm in two parts. Prices are for H7 plug gauges with Go and NoGo ends in hardened steel.

Also available:

- other fit sizes, like H6 and H8,
- hard-chrome plated plug gauges,
- tungsten carbide plug gauges,
- extended plug gauges,
- plug gauges with vent hole,
- plug gauges with easy-entry pilot,
- flat plug gauges,
- square and hexagonal plug gauges.

Measuring reports

For all gauges also measuring reports can be ordered.

- ① Inspection report (German) per gauge. Stating of product specifications, measured values after production, used traceable measuring devices, measuring inaccuracy and measuring date. A favourable choice when your quality system does not require traceable (RvA) certificates.
- ② Traceable RvA certificate (Dutch) with measuring reports of the ordered gauges. Besides stating of the measured values the extra assurance of an external RvA inspection.

Because the tracers were supported under pressure, they don't move on their own.

Head magnifiers 2.2x ... 5.2x

Because of the velcro strip, the head magnifier can be used easily. The great advantage of a head magnifier is that the user has both hands free for e.g. production and assembly of precision instruments. The head magnifier is designed in such a way that people who wear glasses can use it as well. With the extra pair of lenses inside the head magnifier, the magnification can be enhanced from 2.2x to 3.3x.

Glass rulers L = 50 ... 1000 mm

The glass ruler is made from clear glass, on which a graduation has been engraved. The glass is highly resistant to temperature fluctuations. Main advantage of the glass ruler is that the entire product remains visible when the ruler is used, unlike the scale magnifiers where only part of the product stays visible. It can also be used as a reference ruler for magnification checks.

- Graduation: 0.1 mm.
- Accuracy: ± 0.02 mm.

Fixture system for measuring microscopes

DF is a fixture system developed and produced by Schut and designed for building product fixtures, particularly for optical measurements.

It is especially suited for the quick and easily fixing and positioning of small products, for instance by using an angle stop and spring clamp.

DF is very easy to mount with single-screw couplings to build fixtures with a high repeatability and to realize a short lead-time for measuring jobs.

DF consists of a full range of fixture components: bars, connection components and fixing components. DF is a universal fixture system and can be mounted on almost any type of microscope or measuring microscope.

See for more information the page “DF product fixture system”.

TESA Micro-Hite Plus M 350/600/900

The TESA Micro-Hite Plus M (motorized) 350/600/900 are universal height gauges for use in the measuring room as well as in the workshop for 1D as well as 2D measurements. Very suitable for accurate internal, external, height, depth and distance measurements of various measuring objects with flat, parallel or cylindrical surfaces. The measuring program in the control unit calculates all relations between the measuring features automatically. 2D measurements are also possible to perform by rotating the workpiece 90° (or another known angle) to determine for example the bore coordinates.

No need to be an expert. These height gauges distinguish themselves from other height gauges by excellent performance and logical and easy operation. With the rotary power control the TESA Micro-Hite Plus M combines the speed of a manually operated height gauge with the precision and easy handling of a motorized one.

- Complete stand-alone design, without cable. Ideal for product inspection in the production environment.
- Air cushion for easy displacement on an optional surface plate (see Surface Plates).
- High accuracy in length, straightness and perpendicularity through CAA (Computer Aided Accuracy).
- Fast and reliable probing of the workpiece, in particular with bore measurements, through constant measuring force.
- Fast electro motorized measuring head displacement of 7.5 to 40 mm/s.
- Optical and acoustic signal to confirm the measuring value.

Accuracy

The accurate guidance provides the possibility of reliable measurements of form and model deviations, like straightness, perpendicularity or parallelism.

Higher accuracy through CAA (Computer Aided Accuracy)

The Micro-Hite is an automatic, microprocessor controlled, height gauge. The automatic correction of the biased errors by software improves the accuracy. These correction values, stored in the memory, compensate for any systematic deviations of the basic instruments for measurements of length, perpendicularity and straightness.

TESA electronic probe

Electronic probe with a measuring range of 13 mm, to measure perpendicularity, straightness, angle deviation, as well as parallelism in relation to the base plane and the roundness.

The probe can assume three positions: straight forward, to the right side and the left side.

In these positions, fixed with a fixing piece, the correction factor of the Micro-Hite Plus M is incorporated automatically in the measurement.

ROMER Absolute Arms from Hexagon Metrology

The ROMER measuring arms provide maximum mobility in industrial metrology. Mobility, stability, low weight and high performance make these measuring arms an all-purpose 3D measuring system for increasing productivity and minimalisation of rejection by early inspection.

7 Basis models are available, with measuring range from 1.5 until 4.5 meter and with an accuracy from ± 0.023 mm. Measurements can be performed by probe, probe scanning and/or non-contact with an integrated laserscanner.

The measuring arms are constructed with a stable, double-walled carbonfiber tube construction and have a fully absolute measuring system, which makes initialisation unnecessary.

Automatic probe recognition during exchange of the probe, without the necessity of probe re-calibration. The mobility of the ROMER portable measuring arms enables excellent measuring on location for example measuring in a machining center. Applications are for example measuring of machine-constructions, general alignment and frame, sheet and tube parts and assemblies.

- Measuring range: 0 - 4.5 m.
- Volumetric accuracy:
Probe measurements: from ± 0.023 mm (including probe accuracy).

Remote Instrument Display

The Remote Instrument Display (RID) is an easy to use 2-channel display unit for connecting both RS232C and Mitutoyo instruments and display the measurement value on a large, well readable display. For a quick Go/NoGo indication both channels have their own 24 position LED bar with a user-defined upper and lower tolerance limit. Using the RID can simplify batch measurements significantly and makes human interpretation errors almost impossible. Also a combination of the RID with one or two scale units can be a low-cost solution for a digital read-out system on e.g. a drill press or lathe.

The RID is equipped with a Mitutoyo Digimatic and a RS232C output, so the measured values can be sent directly to a printer or PC by pressing the print button on the RID, the optional foot switch or by sending commands from the PC. Its lightweight construction, compact design and the simplicity of the controls make this RID a user-friendly and flexible accessory for your measuring instruments, suitable for use in both cleanroom and workshop.

- 2 display channels.
- 2 LED bars with 22 positions each.
- LED bar indication option: bar or individual LED.
- User defined upper and lower tolerance limit for Go/NoGo indication.
- 2 RS232C inputs.
- 2 Mitutoyo Digimatic inputs.
- RS232C data output for PC or printer.
- Mitutoyo Digimatic printer output.
- Foot switch input.
- Keyboard data output option (see Smartbox).

Smartbox

The Smartbox is an interface that connects various digital (measuring) instruments and indicators to computer programs, such as Approve, spreadsheets and databases. This will make a program-oriented software driver redundant.

The measuring value of the connected instrument is read into standard software as spreadsheet or Approve as if it has been entered by means of the keyboard. The USB Smartbox is linked directly to a USB port (cable is included).

It is possible to connect an instrument equipped with a Mitutoyo or RS232C data output with the Smartbox, for example TESA, Magnescale, Kröplin, Preisser, Helios. However, instruments need a specific data cable. See also table below.

The Smartbox is equipped with a 10p Mitutoyo compatible and an RS232C 9p (male) D-connector, and also has a program-controlled microprocessor. The DIP switches allow you to choose between the various instruments. The Smartbox is powered by your PC.

DeMeet video and multi-sensor measuring machines

When you want to determine the quality strategy for your production, more and more you need to measure dimensions that cannot be measured with conventional instruments.

Our objective was to develop a series of video and multi-sensor measuring machines for general quality control with a market-matched measuring range.

The DeMeet-220 is developed as a personal measuring machine with a desktop design. For the inspection of larger products or for measuring a batch of products in one measuring cycle the DeMeet-400 series is the all-round measuring machine, with the DeMeet-705 at the end of the range.

The DeMeet measuring machines are designed with a fixed bridge construction. The application of quality components ensures excellent performance and highly accurate measurements.

With an excellent price-performance ratio the DeMeet measuring machines break the barrier for high-precision quality control on the production floor as well as in measuring laboratories.

The DeMeet 3D CNC coordinate measuring machines bring your productivity to a higher standard. To guarantee your production process at the highest quality level for the right price.

Optics

With non-contact measuring the measurements in 2D and/or 3D are performed without the risk of product deformation or damage. Within the (camera) field of view a very high accuracy can be achieved. The measuring speed of optical measurements with the DeMeet is very high.

A combination of high quality optics and camera is integrated for a clear image with an excellent contrast and a high resolution.

Telecentric optics are supplied as a standard to avoid perspective image distortion around the center of the field of view (see picture).

The DeMeet is either equipped with Nikon or Leica-Design optics for a brilliant image with high contrast.

For a very large field of view with a large depth of focus the DeMeet can be equipped with a Zeiss lens. With this optics a small workpiece for example can be measured in one field of view without focussing in between the measurements.

Illumination

Optimal illumination is essential for accurate measurements. The DeMeet is standard equipped with three different light sources*.

A ring light consisting of a 3 rings LED pattern, which can be controlled per individual ring, segment and cell, is standard supplied for optimal light configuration. The ring light can be set in intensity and angle to achieve the best contrast with clearly defined edges.

The LED based backlight and coaxial light can be adjusted in intensity. The coaxial light can be used for illumination inside deep located structures.

* Applicable for Nikon and Leica-Design optics. The Zeiss lens option is not supplied with coaxial illumination.

Multi-sensor technology

When measuring certain features encounters the physical limits of non-contact measurement, the DeMeet machines can be additionally equipped with a touch probe system. With the DeMeet Combo model both principles are integrated and measurements can be performed by the optical and the probing system. Standard a Renishaw TP20 with a 5-way stylus configuration is supplied. Applications of multi-sensor measuring are among others in the precision engineering, medical, plastics and electronics industry.

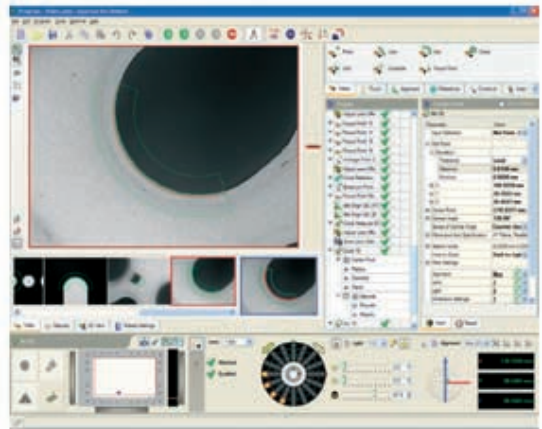

Approve for DeMeet multi-sensor software

Approve for DeMeet is a true multi-sensor software package. It has been developed from the ground up, keeping the differences between the measurement inputs of the different measuring devices limited to only the necessary.

Approve for DeMeet is designed to be a user-friendly software package, but still is flexible and very elaborate to measure many products. Highly accurate measurements in 2D and/or 3D can be done for all kinds of industries like precision mechanics, medical, plastics or electronics to improve quality control.

All the measuring results of video and touch probe can be displayed, reported, exported and used in constructs together, and are dynamically updated.

3D movements

The 3D motor controller in Approve for DeMeet makes blended, curved, smooth moves for all measuring instruments (including video).

All movements and measuring results are corrected using an advanced 3D correction model. The DeMeet will also move during video image processing and other calculations.

Measurements

For video measurements our proprietary image processing algorithms were developed, which are completely different from algorithms used by other competing products and our previous software. The edge find algorithm finds complete curves instead of separate points. The interpolation of the pixels is virtually infinite and very accurate.

Video targets larger than one field of view can be measured in one program step, and will be automatically split into more images and combined together for the fitted result. The camera angle correction makes the combination of results of the separate images very accurate.

For touch measurement it is normal that the targets are defined in 3D, but now this is also the case for video measurements.

The graphical touch probe configuration editor allows building a custom configuration for a specific measurement by using an extensive touch probe library.

Measuring program

A measuring program in *Approve for DeMeet* is a real graphical program consisting of simple program steps. Program steps can be changed, added, copied, moved and removed very easily.

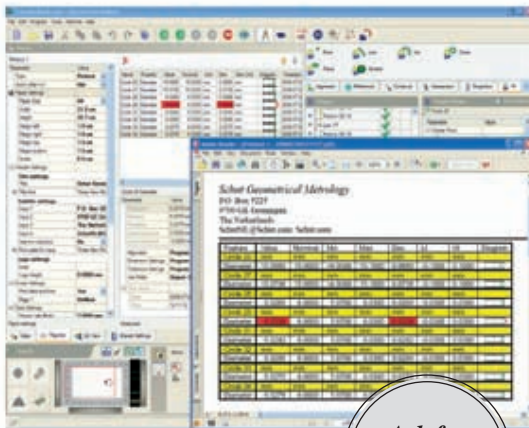

Certain settings in the input have detailed editors in the bottom bar (lights, alignments and measuring instruments). These settings and others (movement settings, tolerances, etc.) can be shared between program steps.

Results, report and export

All results, either from measurements, calculations (constructs, fits, etc.) or other program steps, can be added to an export or a report by drag-and-drop, or by copy and paste. An export can be either to a PDF file or a CSV file. The CSV file can also be used to export the data to Approve DataManager for statistical analysis.

For every result a graphical bar indicator is shown when tolerances are being used. Reports can be automatically printed and/or exported at the end of measuring program run.

Fixture systems for the DeMeet measuring machine

Solid positioning of the measuring product is essential for accurate measurements, especially for touch probe measurements. A fixture system can also be used for batch measurements. The measuring table of the DeMeet is prepared for DF and Alufix fixture systems.

DF is designed for constructing 2D/3D product fixtures, particularly for optical measurements. Produced from extruded or machined anodized aluminum DF consists of a full range of fixture components and is also available in basic sets.

Alufix is a uniquely designed modular fixture system to prepare a product-fixture in a short time. Besides all the separate components two basic sets are composed for the DeMeet: an Alufix 16 set for light weight products and an Alufix 25 set for larger and heavier products.

Custom fixture systems for the DeMeet measuring machines

When products need to be measured in a batch and a standard fixture system does not provide the right solution e.g. caused by the extraordinary shape or small dimensions of the product, a custom made fixture can provide the solution. This is especially the case for products that need to be measured optically.

A certain repeatability of product positioning in the fixture is important for a quick set-up time in e.g. the production environment. We can assist you in the development and manufacturing of a custom fixture. There is a range of possibilities, from machined fixturing positions in acryl glass to magnet and vacuum fixture systems.

DF product fixture system

DF is a new fixture system developed and produced by Schut and designed for building 3D product fixtures, particularly for optical measurements.

Solid product positioning is essential for accurate measurements. DF is very easy to mount with single-screw couplings to build fixtures with a high repeatability and to realize a short lead-time for measuring jobs.

DF consists of a full range of fixture components: bars, connection components and fixing components. Produced from extruded or machined AlMgSi1 aluminum with either a black or silver anodized finishing. The black anodized version avoids light reflections. The silver components can be applied when light reflections from the fixture are required.

DF is a universal fixture system and can be mounted on any type of measuring machine. With special couplings the system is fully compatible with the measuring tables of the DeMeet video and multi-sensor coordinate measuring machines.

Alufix fixture system

Alufix is a flexible fixture system made of high-tensile aluminum, also used in the aerospace industry due to its high clamping force. It is designed in cooperation with the automotive industry, rendering unlimited possibilities.

Applications of Alufix are for example:

- Product fixtures for coordinate measuring machines or other measuring systems (e.g. probe/dial indicator measuring systems and height gauges).
- Product fixtures for various mounting purposes.
- Product fixtures for various production applications like welding.

The great diversity enables a fixture for almost any product. E.g. Alufix is used in aerospace, plastics and car manufacturing industries.

Some advantages of the Alufix system:

- Alufix can save time and money, because the fixtures are quick and easy to assemble.
- All components are re-usable.
- Aluminum has low weight and is corrosion free.

	Center distance c/mm	Bore diameter d/mm
Alufix 16	16	8
Alufix 25	25	12.5
Alufix 40	40	20
Alufix 50	50	25

The basis consists of a base plate or a “quader”. With all sorts of connecting elements you can fix other basic elements, building elements, vices, claw plates, prisms and various other Alufix elements.

Alufix is available in **Alufix 16** for fixturing small, light objects, **Alufix 25**, **Alufix 40**, **Alufix 50**, the **XL** and **XS** system and the **Fixinspect** system.

The center distances (c) of the bores are indicated by the type number, for example 25 mm for Alufix 25. The diameter (d) of the bores is half of this number, so 12.5H7. The various versions can be connected with positioning sleeves.

Example of an Alufix basic set: 438 pieces, delivery with workstation.

All Alufix parts are separately available, and can be assembled to create a product specific fixture. There are also sets of a more general composition.

Fixtures for height gauges can be rotated by 90° allowing 2 coordinates to be measured.

Alufix base plates

Alufix base plates serve as a basis for small to medium fixtures. They can be connected on all six sides using quick or screw connection elements and can therefore be used in an extremely flexible way.

Probes and probe systems

TP20 probe system

The TP20 probe consists of two parts; a probe body, and a detachable probe module that contains the kinematic touch sensor and carries the stylus assembly.

The probe body has a standard M8 x 1.25 screw connector, which enables simple fitment to all CMMs with a Renishaw standard probe head (including PH6). The body contains a

magnetic proximity switch to inhibit triggering of the probe during automatic module changing with the MCR20. (The TP20 NI, *Non-Inhibit*,

is not affected by magnetic fields and must be inhibited through software. The TP20 NI is available on request.)

The probe module is connected to the probe body by a highly repeatable magnetic kinematic coupling, which allows the automatic (CNC) or manual exchange of modules without the need to requalify the stylus tips.

Seven probe module options are available, each with a preset trigger force designed to ensure maximum probe performance when using different stylus configurations.

Probes and accessories

The element of the product to be measured determines the type and length of the probe. Maximum rigidity of the stem and perfect roundness of the ball are very important.

Only the M2 styli of the Renishaw probe program have been included in this catalog. M3, M4 and M5 are also available on request. The M2 probes are primarily suitable for the TP2, TP20 and TP200 probe systems.

Choosing probes for inspections

In order to maximize the accuracy of the main part of the probe applications, we advise you to use:

- the shortest and stiffest probes possible; the more the probe bends or deviates, the lower the measuring accuracy.
- the largest possible probe ball; the bigger the probe ball, the greater the free space between the ball and the stem and the smaller the effect of the surface condition of the product that has to be measured.
- as little extensions as possible; every connection introduces a potential diffraction or deviation.

Manual Indexing Probes MH20/MH20i

The MH20 and MH20i are adjustable manual probe heads for multi-orientation of the measuring probe for advanced measurement applications. This system can be installed on new and existing measuring machines.

MH20 is a compact, infinitely adjustable manual probe head offering maximum flexibility in non-repeatable probe orientation. MH20i is a compact manual probe head that offers the significant advantage of repeatable indexing in 15° increments. Repeatable indexing removes the need for constant re-qualification.

The integral TP20 probe mount makes the MH20 and MH20i compatible with the full range of TP20 modules, allowing fast and repeatable interchange between qualified probe modules for maximum productivity. On both MH20 and MH20i a simple locking device locks the swivel in any position within the movement envelope of the head.

Note: MH20 and MH20i are not compatible with the MCR20 Probe Module Changing Rack.

- Probe mounting: TP20 kinematic mount.
- Suitable interface: standard touch trigger interface.
- Probe status identification: 1 LED.
- A axis indexing:
 - MH20: non-indexing swivel $\pm 93^\circ$,
 - MH20i: 0 - 90° in 15° increments.
- B axis indexing:
 - MH20: non-indexing swivel $\pm 300^\circ$,
 - MH20i: $\pm 180^\circ$ in 15° increments.
- Dual axis lock:
 - MH20: single rotary thumbwheel,
 - MH20i: single lock lever.
- Repeatability (2 σ , MH20i only): 1.5 μ m (TP20 standard force and 10 mm stylus).
- Operating temperature: 10 to 40°C.
- Storage temperature: -10 to 70°C.
- Cable connection: 5 pin DIN 180° socket.
- Length (from shank mounting face to kinematic mount):
 - MH20: 73 mm, MH20i: 61 mm.
- Weight: MH20: 100 g, MH20i: 210 g.
