

Calibration Equipment

CONFIDENCE IS NOT ENOUGH...

The control of inspection and measuring equipment is an element of quality management that is now more important than ever before. The introduction of the ISO 9000 family of international standards has also led to major changes in this field. Amongst other things, ISO 9001 specifies that : "all inspection and measuring equipment that can affect product quality must be identified, calibrated and adjusted at prescribed intervals, or prior to use, against certified equipment having a known valid traceable relationship to internationally or nationally recognised standards".

This standard also states that the supplier shall: "ensure that the inspection and measuring equipment is capable of the necessary accuracy and precision".

A Vast Choice

TESA can offer you the most varied methods of measurement specifically suited for the inspection and calibration of standards, handtools and plug gauges. Some of these are described in the various sections of this catalogue, in particular:

- Gauge blocks
- Setting rings
- Cylindrical setting standards with outside diameters
- Optical flats
- Parallel optical flats
- Electronic levels for both straightness and flatness measurement
- Instruments for both squareness and perpendicularity measurement
- Calibration equipment for length measuring devices fitted with inductive probes.

This section is devoted to measuring systems that serve to calibrate other inspection equipment, but they can also be used for high-accuracy measurement of precision parts.

PRESENTATION OF TESA MEASURING GAGE BLOCKS

TESA offers two models, the operation of which is based on two different measurement procedures.

- TESA UPD directly measures gauge blocks within a measuring span of 25 mm/1 in.
- TESA UPC is used for comparative measurement of gauge blocks having a same nominal length.

TESA Gauge Block Comparators		UPD	UPC
	Measuring procedures <ul style="list-style-type: none"> - Comparison of different nominal lengths up to 25 mm - Number of reference gauge blocks required for the calibration of a set of 122 pieces: 9 blocks - Number of blocks required for the calibration of the device: 9 blocks + 6 pairs 		• • •

GAUGE BLOCK COMPARATORS

In the hierarchical chain of dimensional measurements that can be traced back to the standard metre length unit, gauge blocks hold a key position. This makes them the most important material references used in metrology.

The application of the length unit, based on specific wavelengths of light, to gauge blocks is achieved in the first instance by fundamental interferential measurement. Using gauge blocks measured by interferometry, defined lengths are thus transferred to other gauge blocks in measurements further down the hierarchical chain.

TESA UPD – for Direct and Comparative Measurements

- Direct measurement of gauge blocks with a variation in nominal length of up to 25 mm or 1 in.
 - Enables the number of reference gauge blocks required to be reduced by nearly 80 %.
- Comparative measurement of gauge blocks having a same nominal length.
 - Enables lower measurement uncertainties to be achieved due to weaker influences of the systematic errors.
- Equipped with HEIDENHAIN high-precision incremental probes.
- Templates with a new concept for positioning the gauge blocks.
 - Single or dual template system to provide optimum ease of handling of the gauge blocks
- Integrated device for most accurate temperature acquisition.
- On-line transfer of both measured length and temperature values.
- Computer-aided data processing with all the corrections necessary included.

Dual template system for the maintenance of your reference gauge blocks (TESA patented)

- The simultaneous use of two templates allows you to "rest up" your gauge blocks until you need them.
- The application of this new concept turns into significant savings in both time and money.
- During measurement cycles carried out on a routine basis, the distance travelled over the measuring table is reduced by nearly 70 %.
 - This contributes to significant reductions of the risks of damaging and wearing the measurement faces.
- The double protection of your reference gauge blocks leads to significant cost savings through the reduction if the need for:
 - recalibration
 - restoration of the measuring faces
 - replacement of worn or damaged gauge blocks
 - increased downtime (whilst extending the life of your reference gauge blocks)

Single Template System

- Using this system your reference gauge blocks are moved together with those to be calibrated during the measurement cycles.

EN ISO 3650
(ASME B89.1.9-2002 on request)

For gauge blocks with nominal lengths from 0,5 mm to 100 mm / 0.02 in to 4 in

Measuring configuration
Two probes with mechanical contact with the measuring face to be probed are connected in sum measurement (function +A+B).

Measuring points
On the reference gauge block: at the centre of the measuring face (point R). On the gauge block to be measured: at the centre (point 1) as well as the four corners of the measuring face, each lying 2 mm away from the adjacent faces (points 2 to 5).

The central length l_c is determined by probing both points R and 1. For establishing lengths at any point, the measurements shall be carried out at points R plus 1 to 5.

The variation in length v is obtained from measurements taken at points 1 to 5.

Packed suitable for shipping

Identification number

Calibration certificate from the supplier for the comparator or the Swiss Calibration Service for the temperature device.

Errors of Measurement

Provided all metrological conditions are met, the reliability of the comparator used for direct measurement of steel gauge blocks is expressed as follows:

- 
 Repeatability limit (with no influence of external temperature): 0,015 µm
- 
 Uncertainty of measurement: $U = \pm (0,05 + 0,5 \cdot L) \mu\text{m}$ (L in m)
- 
 Condition requires the use of reference standards whose measurement uncertainty is equal to:
 $U \leq \pm 0,015 \mu\text{m}$ for the comparator
 $U \leq \pm (0,02 + 0,2 \cdot L) \mu\text{m}$ (L in m) for the gauge blocks

TESA UPC – for Comparative Measurement

TESA UPC Gauge Block Comparator for Comparative Measurement

- Measures gauge blocks of same nominal length by comparison.
- Comes with the new template system for positioning the gauge blocks.
- Single or dual template system for optimum ease of gauge handling.
- Features TESA high-precision inductive probes.
- Allows ultra-precise temperature measurement, integrated.
- Transfers on-line all measured length and temperature values.
- Executes computer-aided data processing with all required correction values included.
- Performs calibrations that meet the requirements of both ISO standards and EA guidelines (EAL – European cooperation for Accreditation of Laboratories).
- Includes an execution for greater accuracy along with a calibration certificate (optional).

TESA UPC is specially designed for the calibration – or dimensional inspection – of gauge blocks with nominal lengths ranging from 0,5 to 100 mm. The configuration, which consists of two probes aligned opposite one another, associated with both the concept and quality of the measuring system provides full guarantee for an extra low uncertainty of measurement. Although TESA UPC is mainly intended for manufacturers and end-users of gauge blocks, this comparator is also widely used in nationally accredited laboratories.

If specified, TESA can also provide the temperature device available as an option. This device has 4 PT100 platinum resistances, each capturing the temperature of the two gauge blocks along with that of both the measuring table and the support. Computer-aided data processing lets you carry out any calibration most reliably and rationally – for sure.

EN ISO 3650

For gauge blocks ranging from 0,5 mm to 100 mm or 0.02 in to 4 in (0,5 to 500 mm on request)

Comparative measurement procedure with transference of the length of a reference gauge block to the gauge block being measured. Measuring configuration 2 probes connected in sum measurement (function +A+B) with mechanical contact with the measuring face.

Measuring points
On the reference gauge block: at the centre of the measuring face (point R). On the gauge block to be measured: at the centre (point 1) as well as the 4 corners of the measuring face, each lying 2 mm away from the adjacent faces (points 2 to 5).

Central length l_c is defined by probing both points R and 1.

Establishing lengths at any point requires measurements to be taken at points R plus 1 to 5.

Variation in length v is the result of measurements taken at points 1 to 5.

≈ 23 kg (comparator complete, but without computer).
≈ 4 kg (temperature device)

Packed suitable for shipping

All instruments with the option for greater accuracy are delivered with serial numbers

In-house calibration certificate for the version with greater accuracy or declaration of conformity for the standard version. Temperature device with SCS certificate.

Error of Measurement

Provided all the metrological conditions are met, the reliability of the two standard executions No. 05930000 and 05930002 is expressed as follows:

Provided all the metrological conditions are met, the reliability of both executions No. 05930001 and 05930003 along with the option for greater accuracy (No. 01690021) is expressed as follows:

Repeatability limit (with no effect due to external temperature): 0,025 µm

Repeatability limit (with no effect due to external temperature): 0,015 µm

Measurement uncertainty*
 $U = \pm (0,10 + 1,0 \cdot L) \mu\text{m}$ (L in m)

Measurement uncertainty*
 $U = \pm (0,05 + 0,5 \cdot L) \mu\text{m}$ (L in m)

Condition involves the use of reference standards (see page L-14 and L-15) whose uncertainty is as follows:
 $U \leq \pm 0,030 \mu\text{m}$
 when calibrating the comparator
 $U \leq \pm (0,05 + 0,5 \cdot L) \mu\text{m}$ (L in m)
 when calibrating the gauge blocks

Condition involves the use of reference standards (see page L-14 and L-15) whose uncertainty is as follows:
 $U \leq \pm 0,015 \mu\text{m}$
 when calibrating the comparator
 $U \leq \pm (0,02 + 0,2 \cdot L) \mu\text{m}$ (L in m)
 when calibrating the gauge blocks

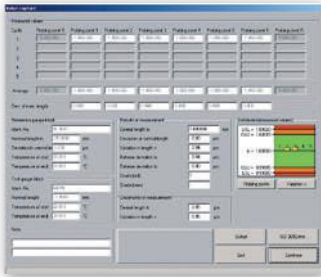

* Applicable to steel gauge blocks

TESA UP – Software Programme for Value Processing

TESA UP programme for processing measured values suitable for both TESA gauge block comparators UPD and UPC as well as for comparators from other manufacturers.

- Choice of 10 languages.
- On-line processing of length and temperature values as transferred.
- Measurement cycles and result outputs according to EN ISO 3650.
- Flexible architecture for optimum adaptation to specific user's needs.
- Possible entry of limit values and accuracy grades peculiar to users.
- Surveillance of value dispersion or value drift throughout length and temperature measurements.
- Automatic execution of all relevant corrections. The programme makes allowances for actual sizes of the reference standards, flattening due to different materials used (steel, tungsten carbide, ceramic), compensation of temperature variations with reference to 20°C according to the varying coefficients of linear expansion – as typical examples.
- Assignment of gauge blocks to their relevant grade.
- Possible storage of gauge block set related data.
- Inch or metric value processing.
- Calibration certificate in several formats.

Gauge Blocks for the Calibration of Comparators

To calibrate both TESA gauge block comparators UPD and UPC, we recommend the use of the gauge block set described hereafter. The 9-piece set is also required for calibrating TESA UPD.

Set composition including 11 gauge blocks.

Each pair is in full compliance with:

- EAL-G21 – Calibration of gauge block comparators – European cooperation for Accreditation of Laboratories
- DKD-R 4-1 – Guidelines of the German Calibration Service (DKD) for the calibration of gauge block comparators.

S59110152	Set of 11 gauge blocks with PTB (Physikalisch Technische Bundesanstalt) certificate	$\pm 0,015$ μm
S59110489	Set of 11 gauge blocks with DAkkS certificate	$\pm 0,030$

Full tungsten carbide set also available on request

Pairs N°	Nominal length	
	A mm	B mm
1	0,5	0,5
2	1,0	1,005
3	1,0	1,01
4	4,5	4,5
5	100,0	100,0
6	6,0	6,0 *

* Special bridge-shaped gauge blocks (see drawing) used for establishing the measuring deviations of lower probe B.

- EN ISO 3650
- Minimum profile requirements for the computer needed to run the TESA UP software programme Personal Computer
 - Configuration without heat source to avoid disturbing the ambient temperature at the measurement spot
 - Operating system: Windows 7 or earlier versions (32 bits)
 - Processor: 650 MHz
 - 1 Hard disc (6 GB)
 - RAM capacity: 64 MB
 - CD-ROM drive (24x)
 - RS232 serial port
 - 1 for length values
 - 1 for temperature values
 - 3 USB ports
- mm/In units

- EN ISO 3650
- Special high-alloy steel, wear resistant and stable. Exception: 6 mm special carbide gauge blocks.
- Wooden case
- PTB or DKD calibration certificate
- Serial number identification
- The given expanded uncertainty $k = 3$ refers to the difference of central length of both gauge blocks A and B forming the pairs 1 to 5 as well as to the deviations f_0 and f_u from the central length of gauge blocks forming both pairs 2 and 3. No need to calibrate those of pair No. 6.

ETALON POLO HORIZONTAL MEASURING BENCH

A giant for small sizes – Specially designed for the control of measuring and test equipment in compliance with ISO 9000.

- Application range from 0 up to 100 mm for external dimensions of 2,5 up to 110 mm for internal dimensions – 50 mm measuring span.
- Resolution to 0,001 or 0,0001 mm – Metric/Inch conversion.
- Maximum permissible error of 0,5 μm .
- Measuring force from 0 to 4 N.
- Comes with a calibration certificate issued by the supplier.

Calibration of Standards:

- Cylindrical test pins
- Setting standards with cylindrical, plane-parallel measuring faces
- Threaded reference gauges (calibrated using the 3-wire method)
- Setting masters
- Setting rings

Workpiece Inspection:

External dimensions

- Stepped shafts
- Cutting tools
- Cylindrical pins
- Ball tips
- Grooves
- Short centring shoulders
- Threads (measured according to the 3-wires method)

Internal dimensions

- Through bores
- Blind bores
- Centring grooves
- Slots
- Sliding guides

Calibration of Plus Gauges:

- Limit plug gauges
- Plug gauges "GO"
- Plug gauges "NO GO"
- Plain plug gauges
- Ring gauges "GO"
- Ring gauges "NO GO"
- Threaded plug gauges
