Rotary-Nut Series Precision Ball Screw/Spline

BNS/NS

[Japanese patent No.] 2060726 (model NS), 2060727 (model BNS)

Structure of Precision Ball Screw/Spline

Structure of Support Bearing
Model BNS-A

Structure of Support Bearing
Model BNS

Structure and Features

The Ball Screw/Spline is a linear-rotary unit that contains Ball Screw grooves and Ball Spline grooves crossing with each other on a single shaft. The nuts of the Ball Screw and the Ball Spline have dedicated support bearings directly embedded on the circumference of the nuts.

The Ball Screw/Spline is capable of performing three (rotary, linear and spiral) modes of motion with a single shaft by rotating or stopping the ball screw nut or the spline nut.

It is optimal for machines using a combination of rotary and linear motions, such as a SCARA robot's Z-axis, assembly robot, automatic loader, and machining center's ATC equipment.

● Zero Axial Clearance

The Ball Spline has an angular-contact structure that causes no backlash in the rotational direction, enabling highly accurate positioning.

● Lightweight and Compact

Since the ball screw nut is integrated with the support bearing, highly accurate and compact design is allowed. In addition, small inertia through the lightweight ball screw nut ensures high responsiveness.

● Smooth Motion with Low Noise

As the Ball Screw is based on an end-cap mechanism, smooth motion with low noise is achieved.

● Highly Rigid Support Bearing

The support bearing on the Ball Screw has a contact angle of 60° in the axial direction while that on the Ball Spline has a contact angle of 30° in the moment direction, thus provide a highly rigid shaft support.

In addition, a dedicated rubber seal is attached as standard to prevent entry of foreign material.

● Easy Installation

The ball spline nut is designed so that balls do not fall off even if the spline nut is removed from the shaft, thus making installation easy. The Ball Screw/Spline can easily be mounted simply by securing it to the housing with bolts (for the housing's inner-diameter tolerance, H7 is recommended).

Types

Model BNS-A [compact type: linear motion + rotary motion]

Model BNS [heavy-load type: linear motion + rotary motion]

Model NS-A [compact type: linear motion]

Model NS [heavy-load type: linear motion]

Static Safety Factor

It is necessary to take into account a static safety factor indicated in Table 1 against the axial load that is applied on the Ball Screw. When studying the static safety factor, a basic static load rating C_{0a} is required.

Ball Screw Unit

[Basic Static Load Rating C_{0a}]

When a Ball Screw receives an excessive load or a large impact load while it is stationary or in motion, a local permanent deformation occurs between the raceway and the steel ball. If the permanent deformation exceeds a certain limit, it will prevent the Ball Screw from smoothly moving.

It is recognized that in general there will be no operational problem if the amount of permanent deformation is up to approximately 0.0001 of the steel ball diameter. The load present in such cases is called basic static load rating C_{0a} .

[Static Safety Factor]

$$f_s \geq \frac{C_{0a}}{F_a}$$

f_s : Static safety factor (see Table 1)

C_{0a} : Basic static load rating (kN) (see the corresponding dimensional table)

F_a : Axial load (kN)

Table 1 Static Safety Factor

| Machine using the Ball Screw | Load conditions | Lower limit of f_s |
|------------------------------|------------------------------|----------------------|
| General industrial machinery | Without vibrations or impact | 1.0 to 1.3 |
| | With vibrations or impact | 2.0 to 3.0 |
| Machine tools | Without vibrations or impact | 1.0 to 1.5 |
| | With vibrations or impact | 2.5 to 7.0 |

Ball Spline Unit

[Basic Static Load Rating C_0]

When a Ball Spline receives an excessive load or a large impact load while it is stationary or in motion, a local permanent deformation occurs between the raceway and the rolling element. If the permanent deformation exceeds a certain limit, it will prevent the Ball Spline from smoothly moving.

The basic static load rating is a static load with a constant direction and magnitude whereby the sum of the permanent deformation of the rolling element and that of the raceway on the contact area under the maximum stress is 0.0001 times the rolling element diameter. With the Ball Spline, it is defined in terms of radial load. Therefore, the basic static load rating is considered to be the limit of the static permissible load rating.

[Static Safety Factor f_s]

When the Ball Spline is stationary or in motion, an unexpected external force may be applied through inertia caused by vibrations, impact or start/stop. It is necessary to take into account a static safety factor against such a working load.

A static safety factor (f_s) of a Ball Spline is expressed in how many times greater is the load capacity (basic static load rating C_0) than the load applied on the Ball Spline.

$$f_s = \frac{C_0}{P}$$

f_s : Static safety factor

C_0 : Basic static load rating (N)

P : Calculated load (N)

Rated Life and Service Life Time

Ball Screw Unit

[Basic Dynamic Load Rating Ca]

Basic dynamic load rating Ca is used to calculate the service life of a Ball Screw in motion with its ball screw nut being under a load. The basic dynamic load rating Ca is an axial load under which the rated life of 90% of a group of the same Ball Screw units independently operating is 10⁶ rev (1 million revolutions).

[Rated Life]

The service life of a Ball Screw is obtained from the equation below using the basic dynamic load rating and the axial load.

$$L = \left(\frac{C_a}{f_w \cdot F_a} \right)^3 \times 10^6$$

L : Rated life (rev)
 Ca : Basic dynamic load rating (N) (see the corresponding dimensional table)
 Fa : Axial load (N)
 fw : Load factor (see Table 2)

Table 2 Load Factor

| Vibrations/impact | Velocity (V) | fw |
|-------------------|-------------------------------|------------|
| Faint | Very low V ≤ 0.25 m/s | 1.0 to 1.2 |
| Weak | Low 0.25 ≤ V ≤ 1.0 m/s | 1.2 to 1.5 |
| Medium | Moderate 1.0 ≤ V ≤ 2.0 m/s | 1.5 to 2.0 |
| Strong | High 2.0 m/s < V | 2.0 to 3.5 |

[Service Life Time]

When the rated life (L) has been determined, the service life time is obtained from the following equation if the stroke length and the number of reciprocations are constant.

$$L_h = \frac{L \times \ell}{2 \times \ell_s \times n_1 \times 60}$$

Lh : Service life time (h)
 ℓs : Stroke length (mm)
 n1 : Revolutions per minute (min⁻¹)
 ℓ : Lead (mm)

(For details, see the General Catalog.)

Ball Spline Unit

[Rated Life When a Torque is Applied]

$$L = \left(\frac{f_r \cdot f_c}{f_w} \cdot \frac{C_T}{T_c} \right)^3 \times 50$$

[Rated Life When a Radial Load is Applied]

$$L = \left(\frac{f_r \cdot f_c}{f_w} \cdot \frac{C}{P_c} \right)^3 \times 50$$

L : Rated life (km)
 CT : Basic dynamic torque rating (N·m)
 Tc : Calculated load torque (N·m)
 C : Basic dynamic load rating (N)
 Pc : Calculated radial load (N)
 fr : Temperature factor (see the General Catalog)
 fc : Contact factor (see the General Catalog)
 fw : Load factor (see the General Catalog)

[Service Life Time]

When the rated life (L) has been determined, the service life time is obtained if the stroke length and the number of oscillations are constant.

$$L_h = \frac{L \times 10^3}{2 \times \ell_s \times n_1 \times 60}$$

Lh : Service life time (h)
 ℓs : Stroke length (m)
 n1 : Oscillations per minute (opm)

(For details, see the General Catalog.)

Accuracy

The Ball Screw/Spline is manufactured with the following specifications.

Ball Screw Unit

Axial clearance : 0 or below

Lead accuracy : C5

(For details of the specification values, see the General Catalog.)

Ball Spline Unit

Clearance in the rotational direction : 0 or below (CL: light preload)

Accuracy : class H

(For details of the specification values, see the General Catalog.)

Action Patterns

Basic Actions of Model BNS

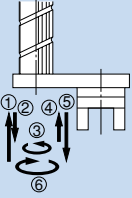

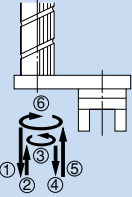

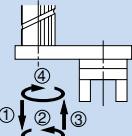

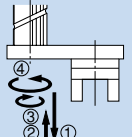

| Motion | Action direction | Input | | Shaft motion | |
|-------------------|---------------------------------|-------------------|--------------------|----------------------------|---------------------------------------|
| | | Ball Screw pulley | Ball Spline pulley | Vertical direction (speed) | Rotational direction (rotation speed) |
| 1. Vertical | ① Vertical direction → downward | N_1 | 0 | $V=N_1 \cdot \ell$ | 0 |
| | Rotational direction → 0 | (Forward) | | $(N_1 \neq 0)$ | |
| | ② Vertical direction → upward | $-N_1$ | 0 | $V=-N_1 \cdot \ell$ | 0 |
| | Rotational direction → 0 | (Reverse) | | $(N_1 \neq 0)$ | |
| 2. Rotational | ① Vertical direction → 0 | N_1 | N_2 | 0 | N_2 (Forward) |
| | Rotational direction → forward | | (Forward) | | $(N_1=N_2 \neq 0)$ |
| | ② Vertical direction → 0 | $-N_1$ | $-N_2$ | 0 | $-N_2$ (Reverse) |
| | Rotational direction → reverse | | (Reverse) | | $(-N_1=-N_2 \neq 0)$ |
| 3. Spiral | ① Vertical direction → upward | 0 | N_2 | $V=N_2 \cdot \ell$ | N_2 |
| | Rotational direction → forward | | $(N_2 \neq 0)$ | | (Forward) |
| | ② Vertical direction → downward | 0 | $-N_2$ | $V=-N_2 \cdot \ell$ | $-N_2$ |
| | Rotational direction → reverse | | $(-N_2 \neq 0)$ | | (Reverse) |

Basic Actions of Model NS

| Motion | Action direction | Input | Shaft motion |
|-----------------|---------------------------------|---------------------|---|
| | | Ball Screw pulley | Vertical direction (speed) |
| 1. Vertical | ① Vertical direction → downward | N_1 (Forward) | $V = N_1 \cdot \ell$ ($N_1 \neq 0$) |
| | ② Vertical direction → upward | $-N_1$ (Reverse) | $V = -N_1 \cdot \ell$ ($N_1 \neq 0$) |

Extended Actions of Model BNS

| Motion | Action direction | Input | | Shaft motion | | |
|---|------------------|--------------------------------|---------------------|----------------------------|---|---|
| | | Ball Screw pulley | Ball Spline pulley | Vertical direction (speed) | Rotational direction (rotation speed) | |
| 1. Upward → downward → forward → upward → downward → reverse  | ① | Vertical direction → upward | $-N_1$ (Reverse) | 0 | $V = -N_1 \cdot \ell$ ($N_1 \neq 0$) | 0 |
| | ② | Vertical direction → downward | N_1 (Forward) | 0 | $V = N_1 \cdot \ell$ ($N_1 \neq 0$) | 0 |
| | ③ | Rotational direction → forward | N_1 | N_2 (Forward) | 0 | N_2 (Forward) ($N_1 = N_2 \neq 0$) |
| | ④ | Vertical direction → upward | $-N_1$ | 0 | $V = -N_1 \cdot \ell$ ($N_1 \neq 0$) | 0 |
| | ⑤ | Vertical direction → downward | N_1 | 0 | $V = N_1 \cdot \ell$ ($N_1 \neq 0$) | 0 |
| | ⑥ | Rotational direction → reverse | $-N_1$ | $-N_2$ (Reverse) | 0 | $-N_2$ (Reverse) ($-N_1 = N_2 \neq 0$) |
| 2. Downward → upward → forward → downward → upward → reverse  | ① | Vertical direction → downward | N_1 | 0 | $V = N_1 \cdot \ell$ ($N_1 \neq 0$) | 0 |
| | ② | Vertical direction → upward | $-N_1$ | 0 | $V = -N_1 \cdot \ell$ ($N_1 \neq 0$) | 0 |
| | ③ | Rotational direction → forward | N_1 | N_2 | 0 | N_2 ($N_1 = N_2 \neq 0$) |
| | ④ | Vertical direction → downward | N_1 | 0 | $V = N_1 \cdot \ell$ ($N_1 \neq 0$) | 0 |
| | ⑤ | Vertical direction → upward | $-N_1$ | 0 | $V = -N_1 \cdot \ell$ ($N_1 \neq 0$) | 0 |
| | ⑥ | Rotational direction → reverse | $-N_1$ | $-N_2$ | 0 | $-N_2$ ($-N_1 = N_2 \neq 0$) |
| 3. Downward → forward → upward → reverse  | ① | Vertical direction → downward | N_1 | 0 | $V = N_1 \cdot \ell$ ($N_1 \neq 0$) | 0 |
| | ② | Rotational direction → forward | N_1 | N_2 | 0 | N_2 ($N_1 = N_2 \neq 0$) |
| | ③ | Vertical direction → upward | $-N_1$ | 0 | $V = -N_1 \cdot \ell$ ($N_1 \neq 0$) | 0 |
| | ④ | Rotational direction → reverse | $-N_1$ | $-N_2$ | 0 | $-N_2$ ($-N_1 = N_2 \neq 0$) |
| 4. Downward → upward → forward → reverse  | ① | Vertical direction → downward | N_1 | 0 | $V = N_1 \cdot \ell$ ($N_1 \neq 0$) | 0 |
| | ② | Vertical direction → upward | $-N_1$ | 0 | $V = -N_1 \cdot \ell$ ($N_1 \neq 0$) | 0 |
| | ③ | Rotational direction → reverse | $-N_1$ | $-N_2$ | 0 | $-N_2$ ($-N_1 = N_2 \neq 0$) |

THK Precision Ball Screw/Spline Models BNS/NS

⚠ Precautions on Use

● Precautions on Handling

- Disassembling components may cause dust to enter the system or degrade the mounting accuracy of the components. Do not disassemble the components.
- Tilting the shaft and the ball screw nut (or spline nut) may cause them to fall by their own weight.
- Dropping or hitting the Precision Ball Screw/Spline may damage or fracture the ball circulation component, which may cause functional loss. Giving an impact to the product could also cause damage to its function even if the product looks intact.

● Lubrication

- Thoroughly remove anti-corrosion oil and feed a lubricant before using the product.
- Do not mix lubricants of different physical properties.
- In locations exposed to constant vibrations or in special environments, such as clean rooms, vacuum and low/high temperature, normal lubricants may not be used. Contact THK for details.
- When planning to use a special lubricant, contact THK before using it.
- Lubrication interval varies according to the service conditions. Contact THK for details.
- When lubricating the Precision Ball Screw/Spline, attach a greasing plate to the housing in advance (see the figure on the right).

Lubrication Method

● Precautions on Use

- Do not remove the ball screw nut (or spline nut) from the shaft. Doing so may cause the balls to fall off.
- Entry of foreign material to the ball screw nut (or spline nut) may cause damage to the ball circulation component or functional loss. Prevent foreign material, such as dust or cutting chips, from entering the system.
- If foreign material adheres to the product, replenish the lubricant after cleaning the product. For the type of the detergent, contact THK.
- When planning to use the product in an environment where the coolant penetrates the ball screw nut (or spline nut), it may cause trouble to product functions depending on the type of the coolant. Contact THK for details.
- Do not use the product at temperature of 80°C or higher. When desiring to use the system at temperature of 80°C or higher, contact THK in advance.
- If using the product with vertical mount, the ball screw nut (or spline nut) may fall by its own weight. Attach a mechanism to prevent it from falling.
- Using the product at speed exceeding the permissible rotation speed may cause breakage of a component or accident. Be sure to use the product within the specification range designated by THK.
- Forcibly driving in a component may cause an indentation on the raceway. Use care when mounting components.
- If an offset or skewing occurs with the ball screw shaft support and the ball screw nut (or spline nut), it may substantially shorten the service life. Pay much attention to components to be mounted and to the mounting accuracy.
- When using the product in locations exposed to constant vibrations or in special environments such as clean rooms, vacuum and low/high temperature, contact THK in advance.
- Letting the ball screw nut (or spline nut) overshoot will cause balls to fall off or the ball circulation component to be damaged. Be sure not to let it overshoot.

● Storage

- When storing the Precision Ball Screw/Spline, enclose it in a package designated by THK and store it in a horizontal orientation while avoiding high temperature, low temperature and high humidity.

● “LM Guide,” “Caged Ball” and “,” are registered trademarks of THK CO., LTD.

- The photo may differ slightly in appearance from the actual product.
 - The appearance and specifications of the product are subject to change without notice. Contact THK before placing an order.
 - Although great care has been taken in the production of this catalog, THK will not take any responsibility for damage resulting from typographical errors or omissions.
 - For the export of our products or technologies and for the sale for exports, THK in principle complies with the foreign exchange law and the Foreign Exchange and Foreign Trade Control Law as well as other relevant laws.
- For export of THK products as single items, contact THK in advance.

Rotary-Nut Series Precision Ball Screw/Spline

BNS/NS

[Japanese patent No.] 2060726 (model NS), 2060727 (model BNS)

Structure of Precision Ball Screw/Spline

Structure of Support Bearing
Model BNS-A

Structure of Support Bearing
Model BNS

Structure and Features

The Ball Screw/Spline is a linear-rotary unit that contains Ball Screw grooves and Ball Spline grooves crossing with each other on a single shaft. The nuts of the Ball Screw and the Ball Spline have dedicated support bearings directly embedded on the circumference of the nuts.

The Ball Screw/Spline is capable of performing three (rotary, linear and spiral) modes of motion with a single shaft by rotating or stopping the ball screw nut or the spline nut.

It is optimal for machines using a combination of rotary and linear motions, such as a SCARA robot's Z-axis, assembly robot, automatic loader, and machining center's ATC equipment.

● Zero Axial Clearance

The Ball Spline has an angular-contact structure that causes no backlash in the rotational direction, enabling highly accurate positioning.

● Lightweight and Compact

Since the ball screw nut is integrated with the support bearing, highly accurate and compact design is allowed. In addition, small inertia through the lightweight ball screw nut ensures high responsiveness.

● Smooth Motion with Low Noise

As the Ball Screw is based on an end-cap mechanism, smooth motion with low noise is achieved.

● Highly Rigid Support Bearing

The support bearing on the Ball Screw has a contact angle of 60° in the axial direction while that on the Ball Spline has a contact angle of 30° in the moment direction, thus provide a highly rigid shaft support.

In addition, a dedicated rubber seal is attached as standard to prevent entry of foreign material.

● Easy Installation

The ball spline nut is designed so that balls do not fall off even if the spline nut is removed from the shaft, thus making installation easy. The Ball Screw/Spline can easily be mounted simply by securing it to the housing with bolts (for the housing's inner-diameter tolerance, H7 is recommended).

Types

Model BNS-A [compact type: linear motion + rotary motion]

Model BNS [heavy-load type: linear motion + rotary motion]

Model NS-A [compact type: linear motion]

Model NS [heavy-load type: linear motion]

Static Safety Factor

It is necessary to take into account a static safety factor indicated in Table 1 against the axial load that is applied on the Ball Screw. When studying the static safety factor, a basic static load rating C_{0a} is required.

Ball Screw Unit

[Basic Static Load Rating C_{0a}]

When a Ball Screw receives an excessive load or a large impact load while it is stationary or in motion, a local permanent deformation occurs between the raceway and the steel ball. If the permanent deformation exceeds a certain limit, it will prevent the Ball Screw from smoothly moving.

It is recognized that in general there will be no operational problem if the amount of permanent deformation is up to approximately 0.0001 of the steel ball diameter. The load present in such cases is called basic static load rating C_{0a} .

[Static Safety Factor]

$$f_s \geq \frac{C_{0a}}{F_a}$$

f_s : Static safety factor (see Table 1)

C_{0a} : Basic static load rating (kN) (see the corresponding dimensional table)

F_a : Axial load (kN)

Table 1 Static Safety Factor

| Machine using the Ball Screw | Load conditions | Lower limit of f_s |
|------------------------------|------------------------------|----------------------|
| General industrial machinery | Without vibrations or impact | 1.0 to 1.3 |
| | With vibrations or impact | 2.0 to 3.0 |
| Machine tools | Without vibrations or impact | 1.0 to 1.5 |
| | With vibrations or impact | 2.5 to 7.0 |

Ball Spline Unit

[Basic Static Load Rating C_0]

When a Ball Spline receives an excessive load or a large impact load while it is stationary or in motion, a local permanent deformation occurs between the raceway and the rolling element. If the permanent deformation exceeds a certain limit, it will prevent the Ball Spline from smoothly moving.

The basic static load rating is a static load with a constant direction and magnitude whereby the sum of the permanent deformation of the rolling element and that of the raceway on the contact area under the maximum stress is 0.0001 times the rolling element diameter. With the Ball Spline, it is defined in terms of radial load. Therefore, the basic static load rating is considered to be the limit of the static permissible load rating.

[Static Safety Factor f_s]

When the Ball Spline is stationary or in motion, an unexpected external force may be applied through inertia caused by vibrations, impact or start/stop. It is necessary to take into account a static safety factor against such a working load.

A static safety factor (f_s) of a Ball Spline is expressed in how many times greater is the load capacity (basic static load rating C_0) than the load applied on the Ball Spline.

$$f_s = \frac{C_0}{P}$$

f_s : Static safety factor

C_0 : Basic static load rating (N)

P : Calculated load (N)

Rated Life and Service Life Time

Ball Screw Unit

[Basic Dynamic Load Rating Ca]

Basic dynamic load rating Ca is used to calculate the service life of a Ball Screw in motion with its ball screw nut being under a load. The basic dynamic load rating Ca is an axial load under which the rated life of 90% of a group of the same Ball Screw units independently operating is 10⁶ rev (1 million revolutions).

[Rated Life]

The service life of a Ball Screw is obtained from the equation below using the basic dynamic load rating and the axial load.

$$L = \left(\frac{C_a}{f_w \cdot F_a} \right)^3 \times 10^6$$

L : Rated life (rev)
 Ca : Basic dynamic load rating (N) (see the corresponding dimensional table)
 Fa : Axial load (N)
 fw : Load factor (see Table 2)

Table 2 Load Factor

| Vibrations/impact | Velocity (V) | fw |
|-------------------|-------------------------------|------------|
| Faint | Very low V ≤ 0.25 m/s | 1.0 to 1.2 |
| Weak | Low 0.25 ≤ V ≤ 1.0 m/s | 1.2 to 1.5 |
| Medium | Moderate 1.0 ≤ V ≤ 2.0 m/s | 1.5 to 2.0 |
| Strong | High 2.0 m/s < V | 2.0 to 3.5 |

[Service Life Time]

When the rated life (L) has been determined, the service life time is obtained from the following equation if the stroke length and the number of reciprocations are constant.

$$L_h = \frac{L \times \ell}{2 \times \ell_s \times n_1 \times 60}$$

Lh : Service life time (h)
 ℓs : Stroke length (mm)
 n1 : Revolutions per minute (min⁻¹)
 ℓ : Lead (mm)

(For details, see the General Catalog.)

Ball Spline Unit

[Rated Life When a Torque is Applied]

$$L = \left(\frac{f_r \cdot f_c}{f_w} \cdot \frac{C_T}{T_c} \right)^3 \times 50$$

[Rated Life When a Radial Load is Applied]

$$L = \left(\frac{f_r \cdot f_c}{f_w} \cdot \frac{C}{P_c} \right)^3 \times 50$$

L : Rated life (km)
 CT : Basic dynamic torque rating (N·m)
 Tc : Calculated load torque (N·m)
 C : Basic dynamic load rating (N)
 Pc : Calculated radial load (N)
 fr : Temperature factor (see the General Catalog)
 fc : Contact factor (see the General Catalog)
 fw : Load factor (see the General Catalog)

[Service Life Time]

When the rated life (L) has been determined, the service life time is obtained if the stroke length and the number of oscillations are constant.

$$L_h = \frac{L \times 10^3}{2 \times \ell_s \times n_1 \times 60}$$

Lh : Service life time (h)
 ℓs : Stroke length (m)
 n1 : Oscillations per minute (opm)

(For details, see the General Catalog.)

Accuracy

The Ball Screw/Spline is manufactured with the following specifications.

Ball Screw Unit

Axial clearance : 0 or below

Lead accuracy : C5

(For details of the specification values, see the General Catalog.)

Ball Spline Unit

Clearance in the rotational direction : 0 or below (CL: light preload)

Accuracy : class H

(For details of the specification values, see the General Catalog.)

Unit: mm

Action Patterns

Basic Actions of Model BNS

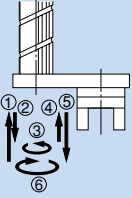

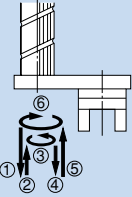

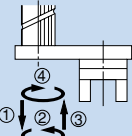

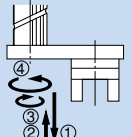

| Motion | Action direction | Input | | Shaft motion | |
|-------------------|---------------------------------|-------------------|--------------------|----------------------------|---------------------------------------|
| | | Ball Screw pulley | Ball Spline pulley | Vertical direction (speed) | Rotational direction (rotation speed) |
| 1. Vertical | ① Vertical direction → downward | N_1 | 0 | $V=N_1 \cdot \ell$ | 0 |
| | Rotational direction → 0 | (Forward) | | $(N_1 \neq 0)$ | |
| | ② Vertical direction → upward | $-N_1$ | 0 | $V=-N_1 \cdot \ell$ | 0 |
| | Rotational direction → 0 | (Reverse) | | $(N_1 \neq 0)$ | |
| 2. Rotational | ① Vertical direction → 0 | N_1 | N_2 | 0 | N_2 (Forward) |
| | Rotational direction → forward | | (Forward) | | $(N_1=N_2 \neq 0)$ |
| | ② Vertical direction → 0 | $-N_1$ | $-N_2$ | 0 | $-N_2$ (Reverse) |
| | Rotational direction → reverse | | (Reverse) | | $(-N_1=-N_2 \neq 0)$ |
| 3. Spiral | ① Vertical direction → upward | 0 | N_2 | $V=N_2 \cdot \ell$ | N_2 |
| | Rotational direction → forward | | $(N_2 \neq 0)$ | | (Forward) |
| | ② Vertical direction → downward | 0 | $-N_2$ | $V=-N_2 \cdot \ell$ | $-N_2$ |
| | Rotational direction → reverse | | $(-N_2 \neq 0)$ | | (Reverse) |

Basic Actions of Model NS

| Motion | Action direction | Input | Shaft motion |
|-----------------|---------------------------------|---------------------|---|
| | | Ball Screw pulley | Vertical direction (speed) |
| 1. Vertical | ① Vertical direction → downward | N_1 (Forward) | $V = N_1 \cdot \ell$ ($N_1 \neq 0$) |
| | ② Vertical direction → upward | $-N_1$ (Reverse) | $V = -N_1 \cdot \ell$ ($N_1 \neq 0$) |

Extended Actions of Model BNS

| Motion | Action direction | Input | | Shaft motion | | |
|---|------------------|--------------------------------|---------------------|----------------------------|---|---|
| | | Ball Screw pulley | Ball Spline pulley | Vertical direction (speed) | Rotational direction (rotation speed) | |
| 1. Upward → downward → forward → upward → downward → reverse  | ① | Vertical direction → upward | $-N_1$ (Reverse) | 0 | $V = -N_1 \cdot \ell$ ($N_1 \neq 0$) | 0 |
| | ② | Vertical direction → downward | N_1 (Forward) | 0 | $V = N_1 \cdot \ell$ ($N_1 \neq 0$) | 0 |
| | ③ | Rotational direction → forward | N_1 | N_2 (Forward) | 0 | N_2 (Forward) ($N_1 = N_2 \neq 0$) |
| | ④ | Vertical direction → upward | $-N_1$ | 0 | $V = -N_1 \cdot \ell$ ($N_1 \neq 0$) | 0 |
| | ⑤ | Vertical direction → downward | N_1 | 0 | $V = N_1 \cdot \ell$ ($N_1 \neq 0$) | 0 |
| | ⑥ | Rotational direction → reverse | $-N_1$ | $-N_2$ (Reverse) | 0 | $-N_2$ (Reverse) ($-N_1 = N_2 \neq 0$) |
| 2. Downward → upward → forward → downward → upward → reverse  | ① | Vertical direction → downward | N_1 | 0 | $V = N_1 \cdot \ell$ ($N_1 \neq 0$) | 0 |
| | ② | Vertical direction → upward | $-N_1$ | 0 | $V = -N_1 \cdot \ell$ ($N_1 \neq 0$) | 0 |
| | ③ | Rotational direction → forward | N_1 | N_2 | 0 | N_2 ($N_1 = N_2 \neq 0$) |
| | ④ | Vertical direction → downward | N_1 | 0 | $V = N_1 \cdot \ell$ ($N_1 \neq 0$) | 0 |
| | ⑤ | Vertical direction → upward | $-N_1$ | 0 | $V = -N_1 \cdot \ell$ ($N_1 \neq 0$) | 0 |
| | ⑥ | Rotational direction → reverse | $-N_1$ | $-N_2$ | 0 | $-N_2$ ($-N_1 = N_2 \neq 0$) |
| 3. Downward → forward → upward → reverse  | ① | Vertical direction → downward | N_1 | 0 | $V = N_1 \cdot \ell$ ($N_1 \neq 0$) | 0 |
| | ② | Rotational direction → forward | N_1 | N_2 | 0 | N_2 ($N_1 = N_2 \neq 0$) |
| | ③ | Vertical direction → upward | $-N_1$ | 0 | $V = -N_1 \cdot \ell$ ($N_1 \neq 0$) | 0 |
| | ④ | Rotational direction → reverse | $-N_1$ | $-N_2$ | 0 | $-N_2$ ($-N_1 = N_2 \neq 0$) |
| 4. Downward → upward → forward → reverse  | ① | Vertical direction → downward | N_1 | 0 | $V = N_1 \cdot \ell$ ($N_1 \neq 0$) | 0 |
| | ② | Vertical direction → upward | $-N_1$ | 0 | $V = -N_1 \cdot \ell$ ($N_1 \neq 0$) | 0 |
| | ③ | Rotational direction → reverse | $-N_1$ | $-N_2$ | 0 | $-N_2$ ($-N_1 = N_2 \neq 0$) |

Model BNS

Dimensional Table for Model BNS

Heavy-load Type: Linear Motion + Rotary Motion

Ball screw unit

| Model No. | Screw shaft outer diameter d | Screw shaft inner diameter dp | Lead Ph | Ball screw dimensions | | | | | | | | | |
|-----------------|---------------------------------|----------------------------------|------------|-----------------------|-----------------------|--------------------------------------|-----------------------------|---------------------|-----------------------------------|----------------------------------|----------------------|----------------------|----|
| | | | | Basic load rating | | Ball center-to-center diameter dp | Thread minor diameter dc | Outer diameter D | Flange diameter D ₁ | Overall length L ₁ | D ₃ h7 | D ₄ H7 | |
| | | | | Ca kN | C _{0a} kN | | | | | | | | |
| BNS 1616 | 16 | 11 | 16 | 3.9 | 7.2 | 16.65 | 13.7 | 52 | $0_{-0.007}$ | 68 | 43.5 | 40 | 32 |
| BNS 2020 | 20 | 14 | 20 | 6.1 | 12.3 | 20.75 | 17.5 | 62 | $0_{-0.007}$ | 78 | 54 | 50 | 39 |
| BNS 2525 | 25 | 18 | 25 | 9.1 | 19.3 | 26 | 22 | 72 | $0_{-0.007}$ | 92 | 65 | 58 | 47 |
| BNS 3232 | 32 | 23 | 32 | 13 | 29.8 | 33.25 | 28.3 | 80 | $0_{-0.007}$ | 105 | 80 | 66 | 58 |
| BNS 4040 | 40 | 29 | 40 | 21.4 | 49.7 | 41.75 | 35.2 | 110 | $0_{-0.008}$ | 140 | 98 | 90 | 73 |
| BNS 5050 | 50 | 36 | 50 | 31.8 | 77.6 | 52.2 | 44.1 | 120 | $0_{-0.008}$ | 156 | 126 | 100 | 90 |

Ball spline

| Model No. | Ball spline dimensions | | | | | | | | |
|-----------------|------------------------|----------------------|--|-----------------------|------------------------|----------------------------------|-----------------------------------|----------------------------------|-----|
| | Basic load rating | | Static permissible moment M _A N-m | Basic torque rating | | Outer diameter D ₇ | Flange diameter D ₅ | Overall length L ₂ | |
| | C kN | C ₀ kN | | C _T N-m | C _{0T} N-m | | | | |
| BNS 1616 | 7.1 | 12.6 | 67.6 | 31.4 | 34.3 | 52 | $0_{-0.007}$ | 68 | 50 |
| BNS 2020 | 10.2 | 17.8 | 118 | 56.8 | 55.8 | 56 | $0_{-0.007}$ | 72 | 63 |
| BNS 2525 | 15.2 | 25.8 | 210 | 105 | 103 | 62 | $0_{-0.007}$ | 78 | 71 |
| BNS 3232 | 20.5 | 34 | 290 | 180 | 157 | 80 | $0_{-0.007}$ | 105 | 80 |
| BNS 4040 | 37.8 | 60.5 | 687 | 418 | 377 | 100 | $0_{-0.008}$ | 130 | 100 |
| BNS 5050 | 60.9 | 94.5 | 1340 | 842 | 768 | 120 | $0_{-0.008}$ | 156 | 125 |

Note Dimension "U" indicates the length from the head of the hexagon socket bolt to the ball screw nut end face.

Note For the db dimension, solid shaft and K hollow shaft (thick) are available. For details, see the "Ball Spline" page of the General Catalog.

THK Precision Ball Screw/Spline Models BNS/NS

⚠ Precautions on Use

● Precautions on Handling

- Disassembling components may cause dust to enter the system or degrade the mounting accuracy of the components. Do not disassemble the components.
- Tilting the shaft and the ball screw nut (or spline nut) may cause them to fall by their own weight.
- Dropping or hitting the Precision Ball Screw/Spline may damage or fracture the ball circulation component, which may cause functional loss. Giving an impact to the product could also cause damage to its function even if the product looks intact.

● Lubrication

- Thoroughly remove anti-corrosion oil and feed a lubricant before using the product.
- Do not mix lubricants of different physical properties.
- In locations exposed to constant vibrations or in special environments, such as clean rooms, vacuum and low/high temperature, normal lubricants may not be used. Contact THK for details.
- When planning to use a special lubricant, contact THK before using it.
- Lubrication interval varies according to the service conditions. Contact THK for details.
- When lubricating the Precision Ball Screw/Spline, attach a greasing plate to the housing in advance (see the figure on the right).

Lubrication Method

● Precautions on Use

- Do not remove the ball screw nut (or spline nut) from the shaft. Doing so may cause the balls to fall off.
- Entry of foreign material to the ball screw nut (or spline nut) may cause damage to the ball circulation component or functional loss. Prevent foreign material, such as dust or cutting chips, from entering the system.
- If foreign material adheres to the product, replenish the lubricant after cleaning the product. For the type of the detergent, contact THK.
- When planning to use the product in an environment where the coolant penetrates the ball screw nut (or spline nut), it may cause trouble to product functions depending on the type of the coolant. Contact THK for details.
- Do not use the product at temperature of 80°C or higher. When desiring to use the system at temperature of 80°C or higher, contact THK in advance.
- If using the product with vertical mount, the ball screw nut (or spline nut) may fall by its own weight. Attach a mechanism to prevent it from falling.
- Using the product at speed exceeding the permissible rotation speed may cause breakage of a component or accident. Be sure to use the product within the specification range designated by THK.
- Forcibly driving in a component may cause an indentation on the raceway. Use care when mounting components.
- If an offset or skewing occurs with the ball screw shaft support and the ball screw nut (or spline nut), it may substantially shorten the service life. Pay much attention to components to be mounted and to the mounting accuracy.
- When using the product in locations exposed to constant vibrations or in special environments such as clean rooms, vacuum and low/high temperature, contact THK in advance.
- Letting the ball screw nut (or spline nut) overshoot will cause balls to fall off or the ball circulation component to be damaged. Be sure not to let it overshoot.

● Storage

- When storing the Precision Ball Screw/Spline, enclose it in a package designated by THK and store it in a horizontal orientation while avoiding high temperature, low temperature and high humidity.

● “LM Guide,” “Caged Ball” and “,” are registered trademarks of THK CO., LTD.

- The photo may differ slightly in appearance from the actual product.
 - The appearance and specifications of the product are subject to change without notice. Contact THK before placing an order.
 - Although great care has been taken in the production of this catalog, THK will not take any responsibility for damage resulting from typographical errors or omissions.
 - For the export of our products or technologies and for the sale for exports, THK in principle complies with the foreign exchange law and the Foreign Exchange and Foreign Trade Control Law as well as other relevant laws.
- For export of THK products as single items, contact THK in advance.
